RIFF JTAG Error codes and troubleshooting
Error code 0x49

1.14 Error code 0x49

Returned by box's firmware when some timeout happens during JTAG communication between box and target. Can happen due to erroneous connection, spontaneous connection errors, target's malfunction, loose of power, etc – or in general – all those factors which may influence loss of synchronization between box and target.

```
#define CMD_RESP_JTAG_WRONG_RESPONSE           0x4A
