

RIFF JTAG Error codes and troubleshooting

Error code 0x48

1.13. Error code 0x48

Returned by box's firmware when attempt to start target running (to exit from debug/halted state) failed. Could happen when user clicks Run Target button and supplies non-existent address in current target's context or due to not-recoverable state of target at that moment.

Unique solution ID: #1017
